4d SITE INDEX

Site Index (SI) is the metres it takes for a tree to grow 50 years. Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height measurements, a site tree will be measured for SI.

4e ESTIMATED SITE INDEX

Estimated Site Index (ESI) is based on the ecosystem's average annual growth potential (e.g. young stands or forests). It is provided by a data source that always precedes it. Associated fields in the database are Inventory Type Group and ESI estimate source code.
