4d SITE INDEX

All SI is entered to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant and co-dominant trees. If the SI is based on breast height age and height, estimated SI is shown after, or replaces, the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees almost present, e.g. adjacent polygons, cruise data, etc. SI trees are to be within the previous 4 A boundaries' fields in the data base and inventory Type Group and SI/Estimated source code.
