4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site index is the average height of dominant leading species. Where an accurate SI cannot be explained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. Recently logged, non-forested, etc. Site index is estimated from attributes & Associated Tables in the data base as in Inventory Type Group and SI Estimated source code.
