4d SITE INDEX
Site index is the mean annual increase referenced at 50 years (breast height age). Site is based on the age and height of the leading species. When an access to it becomes closest from the nearest permanent sample plot or sequence tree data.

4e. ESTIMATED SITE INDEX
Estimated site index is based on the species and ecosystem present, e.g. young stands (<50yrs.). If a site index is estimated by a sheet which also provides it. Associated fields in the data base are inventory type group and BEC biogeoclimatic zone.
