4d SITE INDEX
Site Index is the height, to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown either, or in place, he SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. young stands (<10yrs). It is denoted by a small which means (Ancient) 4. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
