4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site Index is the average height of dominant and leading species. Where not enough SI cannot be obtained from age-height estimated SI is shown also as replaces the SC.

4e. ESTIMATED SITE INDEX

SI is estimated when access to trees cannot present, eg. inaccessible terrain, private property. Site Index is the average height of dominant & subordinate trees in the stand at breast height age. Total Stimus and SI Estimated source code.
