4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site index curves are listed in the Variant Ecology section. Where an actual site SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. Immature stands, or stands with a history of disturbance. Always precedes it Associated fields in the data base are Inventory Type Group and SI Estimated source code.
