4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years
Breast Height Age. SI is based on the age and height of the
dominant trees. SI is estimated when suitable SI trees are present,
age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g.
young stands (<30yrs). It is denoted by a slash which always
precedes the SI number (example /20). Site Series are inventory
Type Group and SI Estimated source code.
