4d SITE INDEX

All SI values in the vegetation table referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Site index is calculated from the inventory age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated SI. SI is estimated by Site Series or Inventory Type Group and SI Estimated source code.
