4d SITE INDEX

50 is estimated site index at reference age of 50 years
Site index is the average height of dominant and co-dominant trees at a specified age. Information accurate if species obtained from age and height, estimated if not, or species has SI.

4e. ESTIMATED SITE INDEX

Site index estimated using Site Index Curves if stand present, e.g. Fd 4 is interpreted site index 40 for Fd in a stand which is known previous it. Recorded fields in the data base are inventory. Type Document 6 if otherwise source data.
