4d SITE INDEX

All SI are shown to the nearest one referenced at 50 years breast height age. Site index curves are based on stem analysis sampling species. Where an unlisted SI is used for attained dbuse, age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremt present, e.g. recently harvested stands. SI is based on Site Index Estimation by Process A. Associated fields in the data base are Inventory Type Group and SI estimated source code.
