4d SITE INDEX

All SI estimates in the inventory are referenced at 50 years breast height age. Site index curves are species and region specific. Where an accurate SI cannot be obtained from age and height estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands, stands with a history of disturbance, or sparse stands. Associated factor in the data base are Inventory Type Group and SI Estimated source code.
