**4d. SITE INDEX**

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant or co-dominant trees. If the relationship between age and height, estimated SI is shown after, or replaces the SI.

**4e. ESTIMATED SITE INDEX**

SI is estimated when suitable SI trees aren't present, e.g. non-forested polygons. The SI is from the nearest soil inventory polygon or, if recorded for that, the data base site inventory Type Group and SI/Estimated source code.
