4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years breast height age unless the species is underlined, indicating a leading species. When an accurate SI cannot be obtained from age/height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when access SI trees were present e.g. Recently logged, but SI trees left. SI is estimated from adjacent polygons if, Associated fields in the data base are Inventory Type Group and SI Estimated source code.
