4d. SITE INDEX

SI (20 year) is the height in metres reached at 50 years Breast Height Age. SI is based on the age and height of the leading species. Where an accurate SI cannot be obtained from site and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when species SI does exist (present), e.g. young stands (<30yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are inventory Type Group and SI estimated source code.
