4d SITE INDEX

Site index is a measure of tree productivity whichever will be given priority. It is based on the age and height of the leading species. When an accurate SI cannot be obtained from VDYP, a default SI is assigned by the Ministry of Forests.

4e. ESTIMATED SITE INDEX

Estimated site index is based on biogeoclimatic ecosystem classification (BEC) and is a stratification of site productivity. It translates fields in the data base and inventory type 'Immature' to Estimated Site Index values.
