4d SITE INDEX

All SI estimates to be converted to site index at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees (largest diameter trees) of the age and height published SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when a value SI does exist at present. e.g. young stands (<20yrs). It is denoted by a slash which always follows the estimated SI value. The SI is based on dominant Type Group and SI Estimate source code.
