4d SITE INDEX

Site index is the height that trees will be in reference at 50 years breast height age. SI is based on the age and height of tree bearing species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

Estimated site index is the site index that cannot present, e.g. young stands (<30yrs). It is denoted by a dash which always precedes it. Associated fields in the data base are Inventory Type Group and SI estimated source code.
