4d SITE INDEX
All SI are shown to the nearest metre at breast age 50 years
Breast Height Age. It is based on the age and height of the dominant and co-dominant trees (usually the largest trees) in the inventory age and height estimated to a shorter offset, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated SI value. Refer to the Site Inventory Type Group and SI Estimated source code.
