4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast Height Age. SI is based on the age and height of the dominant trees. Site index curves are used to estimate site index from age and height; estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren't present, e.g., young stands (<30yrs). It is derived by a draft which always has a site series and a species. Eg. CWH 01 Fd/Hw and Hw/Hw(y)
Type Group and SI/Estimated source code.
