4d SITE INDEX
All SI are shown to the nearest whole metre at a 50 years breast height age. Site index is estimated for all non-forested leading species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren't present; e.g. young stands, recently logged. The SI is shown in brackets preceded it. Associated Note in the data base are inventory Type Group and SI Estimated source code.
