4e SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Site Index curves are the basis for estimating site age and height; estimated SI is shown after) or replaces the 51.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30y.o). It is denoted by a stash which always follows the site index number. Site Index Source is Inventory Type Group and SI Estimated source code.
