4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant trees. Site index curves are from Thrower and Goudie 1992 age and height, estimated SI is shown after or replaces the SI.

4e: ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young mature conifers. It is denoted by a dash which always follows the species code. SI is estimated from site inventory Type Group and SI Estimated source codes.
