4d SITE INDEX

All SI are shown for the nearest metre referenced at 50 years breast height age. SI is estimated for all "non-stocked" and "non-treed leading species. Without an accurate SI cannot be calculated from age and height, estimated SI is shown after or replaces the 0.1.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. non-stocked, non-treed, etc. SI is estimated from the SI of similar stands/ ecosystems & associated fields in the data base are hierarchy. Type Group and SI Estimated source code.
