4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years.
Site Index is the height of the dominant trees at 50 years of mature leading species. When an actual site SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. young stands, recently logged, etc. Estimates are based on previous A Associated fields in the data base are Inventory Type Group and SI Estimated source code.
