4d SITE INDEX
Site index is the mean metre referenced at 50 years breast height age. It is based on the age and height of the dominant and co-dominant trees. Site index is estimated by age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when subalpine fir trees cannot present, eg. young stands or stands with no trees present. Site index is estimated by a site index adjustment table for the Biogeoclimatic Subzone and Variant or Inventory Type Group and SI Estimated source code.
