4d SITE INDEX

Site Index is the expected mean attained at 50 years Breast Height Age. It is based on the age and height of the leading species. When an accurate SI cannot be obtained from survey information it is estimated from moisture/nutrient regime.

4e. ESTIMATED SITE INDEX

Estimated Site Index is used when a site index is not present, e.g. young stands (<10yrs). It is denoted by a dash which always precedes it. Associated fields in the data base are inventory type Group and SI Estimated source code.
