4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years.
Breast Height Age - SI is based on the age and height of the dominant trees. Site Index cannot be obtained from less than 4 metres, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30y.o). SI is denoted by a slash which always precedes it. Immature/ Veteran trees in the stand have one inventory Type Group and SI if assessed separately.
