4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years.
Breast Height Age - SI is based on the age and height of the dominant trees. Breast height age is the number of years between age and height; estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the SI number (e.g. /20). There are five working Type Group and SI Estimated source codes.
