4d SITE INDEX

Site Index is a tree-to-tree estimate referenced at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e: ESTIMATED SITE INDEX

Estimated site index is based on the site series and ecosystem present, e.g. dry alluvial (<50cm). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
