4d SITE INDEX
SI 20 are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest trees in the polygon. Site index is determined from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated number. The codes are Inventory Type Group and SI Estimated source code.
