4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant and co-dominant trees. Site Index Curves use both age and height; estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren=t present, e.g. young stands (regen) or Non-For, Non-Veg with trees polygons provided it. Associated Site is in the data base and inventory Type Group and SI estimated source code.
