4d SITE INDEX

At SI are shown is the nearest metre referenced at 50 years breast height age. Site index curves are based on dominant leading species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, eg. Recently logged, or Non-Forest. Estimated SI is based on analysis provided it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
