4d SITE INDEX
All SI are based on tree dominant trees referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from site and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aremt present, e.g. young stands (<50yrs). It is denoted by a slash which always precedes it. Non-forested lands in the data base are inventory Type Group and 0.0 estimated source code.
