**4d SITE INDEX**

Site Index is the tree height at breast-height-age-more-reforemost at 50 years. Breast Height Age, SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

**4e. ESTIMATED SITE INDEX**

Estimated Site Index is the site index of the leading species almost present, e.g. young stands (<40yrs). SI is identified by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
