4d SITE INDEX
At 50 years is the exact metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest trees in the stand, usually dominant or co-dominant. If age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated from the site series, or where not present, e.g. young stands on cutblocks. SI is entered as a slash which always precedes the SI shown in the data base and inventory
Type Group and SI Estimated source code.
