4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be determined from age and height (immature trees), either a, or estimate the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. recently logged, non-forest, etc. SI is estimated from always produced. Associated data in the data base are Inventory Type Group and SI Estimated source code.
