4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site curves are species and region specific leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. recently harvested sites. The SI is estimated by the following process if, associated fields in the data base are inventory Type Group and SI Estimated source code.
