4d SITE INDEX
All SI are shown in the metered make referenced at 50 years
Site Index (SI) is a measure of site productivity as indicated by mature stand growing species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g. immature stands, deciduous stands, or stands with a history of human disturbance. If associated fields in the data base are in inventory Type Group and SI if estimated source code.
