4d SITE INDEX
All SI are known by the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the Dominant and Co-dominant trees sampled in the polygon from age and height estimated SIs is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI base cannot present: e.g. young stands (<30yrs). It is denoted by a slash which always follows the species code. Estimates are based on air photo interpretation, Type Group and SI estimated source code.
