4d SITE INDEX

Site index is the expected mean height attained at 50 years. Breast Height Age (BHA) is based on the height of the leading species. When an accurate SI cannot be obtained from the VRI database, a default SI is assigned by the MFLNRO Regional Ecologist.

4e ESTIMATED SITE INDEX #

SI is estimated when site trees have been sampled, e.g. planted or Climax. SI is determined by a stem analysis process. Associated fields in the data base are inventory type, estimated SI between source code.
