4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years
Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index curves from Age and height, estimated SI is known after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees were not present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the estimated SI (e.g. 20/). Codes used are the Inventory Type Group and SI Estimated source code.
