4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI may be site specific or derived from leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands, deciduous, etc. The SI is derived from adjacent polygons & Association Table. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
