**4d SITE INDEX**
All SI estimates in the master table referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees in the stand (as indicated by age and height), estimated SI is shown after, or replaces the SI.

**4e. ESTIMATED SITE INDEX**
SI is estimated when suitable SI trees aren't present, e.g. young stands (<30yrs). It is denoted by a lead which shows the species and the SI value, e.g. Fd 20 would be a Douglas fir Site Group and SI 20 where some exist.
