4d SITE INDEX

SI is as shown in the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the leading species. Where an accurate SI cannot be obtained from local yield tables/estimated SI from similar, or surrounding site SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. young stands or recent cutovers. It is derived from a short vertical sample of the leading species and is recorded as one Inventory Type Group and SI/Estimated source code.
