4d SITE INDEX
All Si are shown to the nearest metre referenced at 50 years breast height age. Si is based on the age and height of the leading species. When an accurate Si cannot be obtained from age and height measurements alone, a site index file is...

4e: ESTIMATED SITE INDEX
Si is estimated when suitable SI trees are not present, e.g. young stands (<10yrs). It is denoted by a slash which separates the dominant species and the estimated site index value and inventory Type Group and SI Estimated source code.
