4d SITE INDEX

Site Index is the mean tree height of site tree reference at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e: ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<50yrs). It is denoted by a slash which precedes it. Associated fields in the data base are Inventory Type Group and SI Estimate source code.
