**4d SITE INDEX**

Site index is the expected tree height at 50 years (breast height age). SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

**4e ESTIMATED SITE INDEX**

Estimated site index (ESI) is the site index that cannot present, e.g. young stands (<30yrs). It is denoted by a small which indicates precedes it. Associated fields in the data base are Inventory Type Group and Enhanced source code.
