4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest trees in the stand. Site index is usually derived from age and height, estimated SI is shown after, or replaces the SI.

4e- ESTIMATED SITE INDEX

SI is estimated when no site tree or site tree cannot present, e.g. Non-forested polygons. SI is estimated by a stratification process. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
