4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site Index is the average height of dominant leading species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. Immature stands, Non-Forest, Rock, Alpine, Wetlands and Riparian areas. Associated fields in the data base are Inventory Type Group and SI if estimated source code.
